The latest version of the world's leading reference for clinicians and health Here's the thing: Vaping is hard. Really hard. A 2016 study published in the journal JAMA Pediatrics found that kids are vaping at alarmingly high rates— about 22 percent of high school students and 10 percent of middle school students in a nationwide sample during the 2015-2016 school year reported vaping in the past 30 days. What's more, young people who vape are actually more likely than their counterparts who don't vape to smoke cigarettes, according to a study published last year in the journal JAMA Pediatrics. And the devices they're using are getting more powerful, more readily available, and much cheaper. There have been four deaths associated with vaping, though the cause has not been determined. This April, the Centers for Disease Control and Prevention released a report with e-cigarette use in the U.S. among middle and high school students over the past year, which found that more than tripled, from 2.7 percent to 9.2 percent. The best online news app I've ever found is Texture, a free iPhone and Android app that's an ideal blend of Apple's News app and New York magazine's The Cut. The content quality is excellent, and the magazine-quality layout and design feel both familiar and comfortable. Instead of jumping between the app and the browser, you can easily switch between reading articles on your phone and browsing the site on your laptop or tablet. It's a handy app to have at your fingertips, no matter where you are. The first approach to vaping is simple: by removing the battery and heating coil from your e-cig, you can activate the atomizer to vaporize the liquid you insert into the atomizer. The atomizer has the coil wrapped around the mouthpiece where you can easily insert e-liquid. By applying heat, the atomizer melts the e-liquid to vapor, which you can inhale. The second approach is more complicated and requires a bit more knowledge of the anatomy of an e-cig. With the battery and coil still installed, you want to remove the atomizer and replace it with a heating element called the coil. The health effects of marijuana can be linked to a number of serious disorders, such as memory loss, paranoia and diminished short-term memory. During the past decade, the number of U.S. states with medical marijuana programs has grown from 82157476af
